GDP growth is expected to remain strong but may slow from recent highs

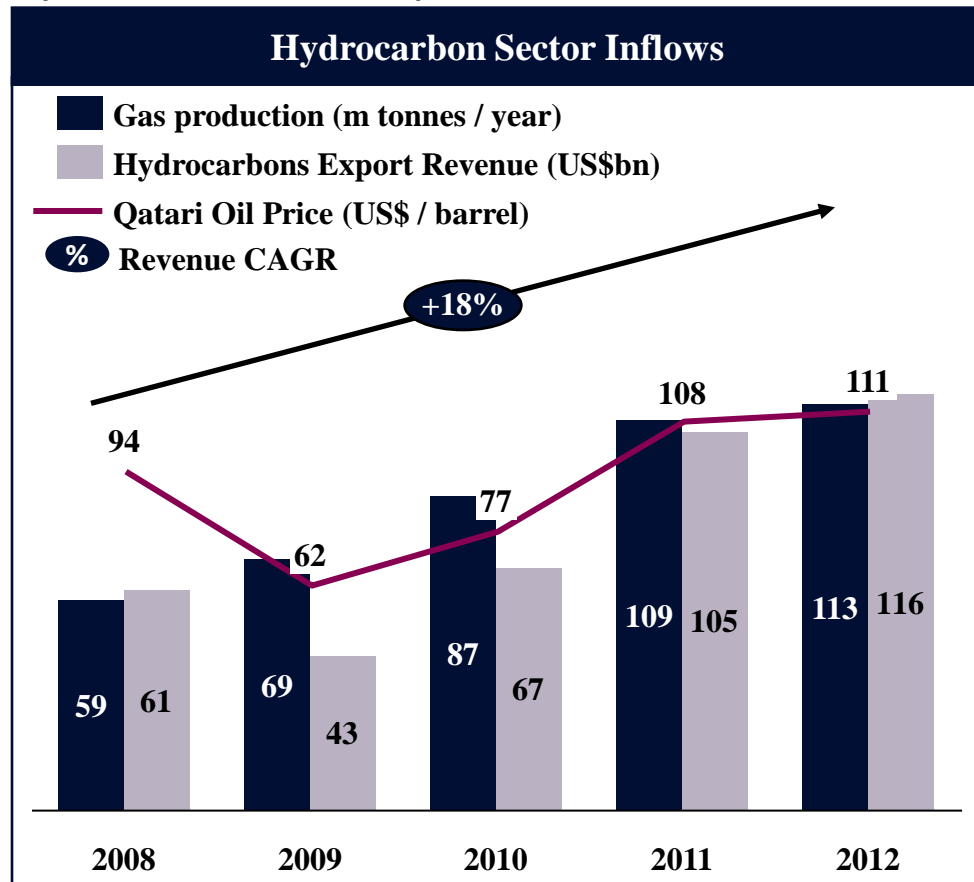

QNB Group GDP forecasts for Qatar

- Minimal new oil and gas production projects will be completed in 2013-14, which should lead to flat growth in the hydrocarbons sector and a slowdown in overall GDP growth
- Falling oil prices will lead to nominal GDP growth being lower than real GDP growth
- In 2013-14, GDP growth will be driven by the non-oil sector, which is expected to expand at 5.8% (real) and 6.4% (nominal)

The government is redistributing the strong inflows from hydrocarbons export revenues to diversify the economy

Hydrocarbon and Non-Hydrocarbon Sectors

- High oil prices and rising production have resulted in strong hydrocarbon revenue inflow
- Hence, Government expenditure¹ has grown rapidly

- Government expenditure has nurtured growth in the non-hydrocarbon sector

Looking ahead, the Government has planned large scale capital outlays to upgrade the infrastructure...
